

SERIES Paper Cutting Machine

Advanced functions and safety performance SC Series paper cutting machine Has been released. The touch panel is easy to observe and large

The accurate and long-life eRC Series paper cutting machine has further evolved, being released as SC Series.

More new functions have been added in pursuit of increased helpfulness and safety.

Ease of maintenance and efficiency are also enhanced. Install now and enjoy complete network connectivity that fulfils requirements of future needs. The technology and idea of ITOTEC which is well acquainted with the job site of paper cutting are packed in this new model.

The sensor reaction area has been widened for safer ... maintenance services, knife replacement and so on. The location of the device can be changed to inside, similarly to the earlier model.

Ŷ

Connect a USB memory or the like to input or output data

A USB port is installed next to the monitor. With additional optional equipment, loaded PDF files such as the instruction manual can be displayed on the monitor.

LED cut line

1

A manual knife lifter is prepared (Option) A knife replacement fixture with a cover is also attached

Knife removal/installation can be made smoothly.

LED cut line (Option) Visible high-luminance LED lamp.

Superior basic performance is inherited /

Accuracy lasts long due to the reliable bidirectional pull drive.

The bidirectional pull drive of the SC Series paper cutting machine is ITOTEC's traditional swing drive method with which each of the left and right worm gears moves the knife. Excellent precision and reliability are obtained together with the unique swing angle at which the knife is pulled while it is pushed.

A waste removal window is installed

Paper waste having dropped inside the paper cutting machine can be removed quickly.

Resin at the backgauge comb teeth (Option)

Damage in the surface plate is suppressed.

The phototube-assisted clamp ascent safety function is activated during pedal operation

Protection is provided to avoid accidents caused by unintended clamp descent. (Selection can be made between activation ON/OFF).

The pedal highpressure function is installed as a standard feature ON/OFF selection can be

made.

1

The size has increased from

8.4" to 10".

Optional units for maximum efficiency

Paper feeding, paper ejection and power saving are considered totally.

ITOTEC meets requirements of needs for efficiency at various angles around the SC Series paper cutting machine. We will propose the best system with abundant experience and realization capability while listening to customer's requests. Our specialized planners will help realize special machine motions and special layouts. Feel free to consult us.

The operation button is provided with a key top, improving the durability

The size is increased, improving the ease of pressing.

The dent at the

bottom of the main

body is eliminated,

increasing stability

The knife speed and maximum backgauge advance speed are improved

In an operation time comparison experiment, the cutting speed was higher than the earlier model, demonstrating a time reduction effect. (Measurement was made between SC-115Z and eRC-115DX. The paper setting time is not included.)

(Option)

The false clamp can be removed or installed at the front and the attachment for keeping the detached false clamp is installed in front of the main body.

adjustment can be done smoothly because there is no need to place the detached lid as it was done before. A phototube sensor provides interlock during work with the cover open. (In case of standard outer phototube specification)

Max. cutting width : 1168mm **SC-115Z**

The photo shows optional specification.

Optional "SCISSOR HANDS" provides capability of using CIP4/JDF data /

Novel efficiency. Linkage with artificial intelligence (AI) produces new-dimension work.

If SCISSOR HANDS (option) is installed, the "SCISSOR HANDS AI" cloud server can be accessed where the best cutting procedure is created instantly with JDF data. Remarkable performance of the latest AI can be fully enjoyed.

Do not hesitate to contact ITOTEC's salesperson in charge for inquiries about functions, installation and so on of SCISSOR HANDS.

Comparison of operation time

Details of paper cutting

Press sheet size - Kiku size. Finish size - A4. Eight pages per press sheet. Margin : 5mm each. Push-out : twice (at backgauge retraction). Total cutting frequency : 12 times.

Earlier model : about 66 sec.

Front removal/installation of the false clamp has become possible

Attachment for keeping the detached false clamp.

The cover of the internal access window is changed to the gate type

Can be opened or closed with a single hand. Maintenance services and knife

The maximum clamp pressure is increased

The cutting accuracy of boards and vinyl materials is improved.

It's not magic. It's a superior capability of SCISSOR HANDS AI.

Visit to play a movie.

ITOTEC ITOTEC is the exclusive agent of SCISSOR HANDS in Japan SCISSOR HANDS is a registered trade mark of OPEN SOFT.

OPENSOF

Large screen. Substantial helpful functions.

The control panel located at the core of the SC Series paper cutting machine is programmed with functions needed to operate the paper cutting machine only. It starts immediately after power-on because of absence of unnecessary loads, so that work can be started immediately.

Stored data Correction calculation 473.00 - 473.00 = 0.00 Page Offset X X +0.16 4 Write Page 1 000 - + Exit X +0.16 Y 0.00 age set ON ON Page † Page Exit

Print deviation correction function

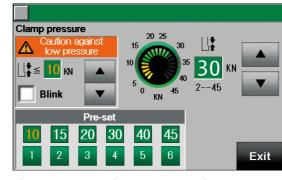

With this function, deviation of the press sheet from the stored cutting data is corrected Even if the actual press sheet is dislocated, cut according to register marks. Deviation from the stored data is automatically calculated and the offset is stored.

There is no need to enter the offset again.

300.00 **Popup window function**

Clamp pressure setting

110

on the display. The pressure is entered from 2KN to 45KN in setting is eliminated.

The pressure can be preset in each course or each page in addition to presetting in 5KN increments. The pressure can be defined optimally according to the characteristic of the cut item or cutting position, eliminating waste paper caused by the pressure error. Complete cutting operation is supported.

Alarm record function

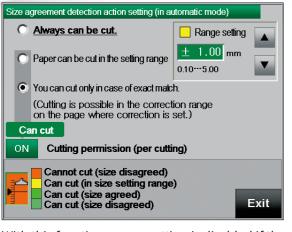

helpful during maintenance work.

/19_13:49 019 Backgauge home posit

Description of the failure in the alarm view is stored

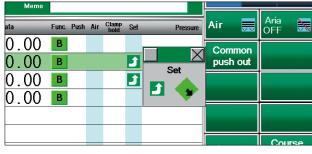

with the date, time and message. This memory is

Size agreement detection function

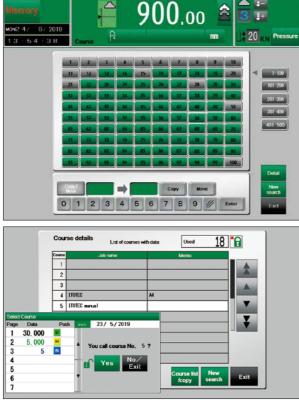

With this function, paper cutting is disabled if the stored data does not agree with the backgauge size. The setting can be changed according to the work so that cutting is performed within a preset range or cutting is performed only upon complete match.

Setting direction window

The work setting procedure and direction of paper rotation are displayed clearly in animation.

Course list view and detail settings

Top : course list view. Bottom : course details screen.

Information about the vacant or occupied course is displayed on the number panel with 100 courses at a time. The course can be moved or copied on the number panel. Write down the job name or memo of each course to perform an AND search and look at the details of the job on course details view.

Automatic knife timing variation function

The paper pressed under the clamp is automatically judged. Even if the

stacked paper is high or if paper is pressed with pedal operation, the knife is driven immediately. The time needed for a cutting cycle can be reduced.

Bright and visible TFT 10" color LCD touch panel

Because 10 pages are displayed at a time (center hold type scroll), course contents can be checked easily, contributing to reduction of entry errors. The language selection function changes the language among Japanese, English, Chinese (simplified or traditional), Thai, Dutch, Spanish and German. Operation can be conducted in your familiar language

An auxiliary window is stored itside the screen. The screen can be called up instantly when necessary while it is hidden during operation on the regular screen

Backgauge acceleration control

The clamp pressure setting can be entered numerically in the range 1KN increments, so that variation in the pressure

A series of backgauge motions are controlled. Best for prevention of workpiece collapse. The general speed, start-up, deceleration and stop can be minutely adjusted.

Message window/alarm function

Alarm! Alarm Protective unit(thermal rel reset

The replacement timing of the knife or oil is indicated with an icon. The current state of the paper cutting machine is visible.

Reliable energy-saving performance!

The paper feeder/discharge unit helps configure a cutting system that matches the job field.

Enhanced efficiency!

Add a damper to automatically transfer

automatically transferred to the dust box, eliminating

waste paper to the dust box.

With an optional damper, the waste paper is

interruption of work needed to discharge waste.

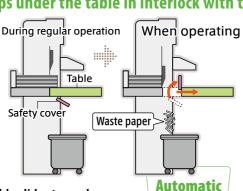

This is helpful ! Enhance efficiency further with helpful optional units.

Allows enabling or disabling the motion on each page.

Waste paper drops under the table in interlock with the cutting switch.

Robo**TRIM**

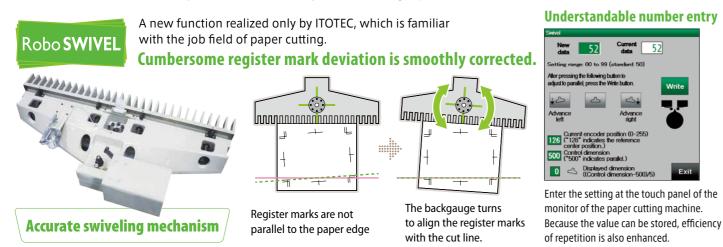

waste

disposal

1. When the cutting switch is pressed, the table slides toward you.

2. The safety cover rises in interlock and the knife lowers. 3. After waste paper has dropped, the table returns to the regular state.

Because a series of motions are quick and smooth, the operator's working rhythm is not disturbed.
